# Swiss Travel System Excellence Program

## Swiss Travel System Excellence E-Learning.

Welcome aboard! The Swiss Travel System Excellence E-Learning is *the* e-learning platform for future Swiss public transport experts. Heidi and Peter take trade specialists on a virtual learning journey through Swiss public transport. In the process, agents can broaden their knowledge in an entertaining way and acquire essential public transport know-how to support their clients professionally and competently.

# Switzerland Travel Academy

A scenic landscape of a Swiss lake and mountains. The text "Welcome to the Switzerland Travel Academy" is centered. Below it, "BECOME A CERTIFIED SWITZERLAND TRAVEL EXPERT" is written in large white letters. At the bottom, "Monte San Giorgio, UNESCO Site" is written. A red "REGISTER NOW" button is at the bottom center. In the top right corner, there is a red box with the "Switzerland get nature" logo.

# Subsustainability

**I care** – With each booking, you have the opportunity to voluntarily make a small 'Cause We Care' contribution. By doing so, you take responsibility for the generated CO2 emissions.

**We care** – If you join us, we will match your contribution and place both amounts into our 'Cause We Care' fund.

**Cause We Care** – Funds from the fund are donated in part to climate protection projects. Simultaneously, we invest in local climate protection and sustainability measures within our own organization.

# Substainability

Recuperation: all vehicles on the Gornergrat Railway have been equipped with asynchronous machines as traction motors.

These restore the unused energy during a downwards journey back to the overhead power lines so that upwards travelling trains can re-use the power. Thus, three trains travelling downhill supply the power for one to two upwards travelling trains.

**"For a return flight from Zurich to Berlin, you could travel 120 times by train from Zurich to the Gornergrat and back. "**

# Subsustainability

## Hydropower

Electric power: 100% renewable hydropower produce locally in Zermatt.

# Subsustainability

## Garaging

All 24 trains are parked in a 250 m long tunnel during winter.

The warmth of the earth will thaw any ice and snow and so no additional heating is required.

The average temperature in the tunnel is around 14 °C in winter.

# Substainability

## Point heating

Around 80% of our points are already equipped with the systems that respond intelligently to humidity and temperature. Thanks to precise measurements of temperature, precipitation and wind, the heating is only activated when it is really necessary.

This not only enables significant energy savings, but also prevents line interruptions due to blocked points. The new heating systems also use 45-50% less electricity, which makes a lasting contribution to conserving resources.
